developer
pre-commit install: the same hooks run before every commit
git push
push / pull request
any branch
git commit
pre-commit hooks
whitespace, YAML / XML checks, ruff check + format, clang-format, prettier, shellcheck
merge to main
release
SemVer tag; products pin versions in their .repos
GitHub Actions · .github/workflows/ci.yml (same file in every repository)
lint (ubuntu-24.04)
pre-commit run --all-files
build-test, matrix: humble | jazzy in ros:<distro>-ros-base
1. checkout into src/<repo>
2. vcs import deps.repos (Dharma dependencies at main)
3. same-branch matching: a dependency with the same branch on origin is checked out at it
4. rosdep install (skips livox_ros_driver2, fast_lio, legkilo)
5. colcon build; colcon test + test-result
6. failures: the end of the log as an error annotation
